

devMatch

DEVMATCH TECHNOLOGIES INDIA PRIVATE LIMITED INTERNAL WIKI

Confidential - For Internal Use Only

Version 2026.08

1. Company Introduction & Vision

devMatch Technologies India Private Limited is a premier Indian engineering-first technology enterprise dedicated to building the world's most seamless real-time networking, collaboration, and co-working platform for software engineers. Founded in Hyderabad in 2021, devMatch was born out of the necessity to eliminate technical silos, connect developers across distributed ecosystems, and match engineers based on algorithmic skill compatibility, coding paradigms, and shared project vision.

- **Vision Statement:** To empower every software engineer globally with an instant, frictionless networking ecosystem that fosters borderless technical collaboration, mentorship, and innovation.
- **Mission Statement:**
 - Build and scale a robust, low-latency networking application tailored specifically for software developers and system architects.
 - Facilitate meaningful peer-to-peer code reviews, open-source project matching, and career mentorship.
 - Establish India's most vibrant and technically rigorous community of software engineers.
- **Core Corporate Values:**
 - Engineers First: Prioritizing developer ergonomics, autonomy, and architectural integrity in every decision.

- Radical Transparency: Maintaining open organizational communication across all engineering and operational tiers.
- Continuous Craftsmanship: Refusing to compromise long-term system reliability for short-term engineering shortcuts.
- Inclusivity and Meritocracy: Creating an unbiased workplace that celebrates technical depth across all backgrounds.

As of 2026, devMatch connects over 500,000 active software engineers across India and global tech hubs, hosts more than 15,000 active open-source collaborative groups, and partners with 100+ leading engineering enterprises.

2. Organization Structure & Teams

devMatch is organized to support rapid engineering execution, cross-functional collaboration, and uncompromising system reliability.

- **Executive Leadership:**

- Chief Executive Officer (CEO): Srikanth Reddy Vangala
- Chief Technology Officer (CTO): Ananya Roy
- Chief Operating Officer (COO): Deepak Menon
- Vice President of Engineering: Rajesh Kumar Sharma
- Chief Human Resources Officer (CHRO): Lakshmi Priya Naidu

- **Key Departments:**

- Engineering: Platform Architecture, Backend Microservices, Mobile Engineering, SRE/DevOps, Security, and QA.
- Product & Design: Product Managers, User Experience (UX) Researchers, and Technical Writers.
- Developer Community & Support: Platform Moderators, Developer Advocates, and Technical Support Engineers.
- Growth & Marketing: Technical Brand Specialists, Hackathon Coordinators, and Enterprise Outreach.

- Operations & Governance: Human Resources, Finance & Payroll, Legal Compliance, and Facilities Management.
- **Reporting Structure:**

All individual contributors report to their respective Engineering Managers or Team Leads, who report to the VP of Engineering or Department Heads. Department Heads report directly to the CEO or CTO. Cross-functional squads are formed around core product domains such as Matchmaking Algorithms, Real-Time Chat Infrastructure, and Developer Profile Graph.
- **Internal Communication Channels:**

Official company communication is strictly restricted to enterprise Slack, Notion, and registered `@devmatch.in` email addresses. External consumer messaging applications such as WhatsApp or Telegram are strictly prohibited for sharing proprietary code, system logs, or employee data.

3. Employment & HR Policies

devMatch is an equal opportunity employer committed to cultivating a workplace free of bias, discrimination, and harassment. All decisions concerning recruitment, compensation, promotion, and professional development are based strictly on merit, technical competence, and organizational requirements. Discrimination or harassment based on gender, caste, religion, marital status, sexual orientation, disability, or age will result in immediate disciplinary proceedings, up to and including termination of employment.

- **Working Hours:** Standard operational hours are 9:30 AM to 6:30 PM IST, Monday through Friday. Core engineering collaboration hours are 10:30 AM to 4:30 PM IST, during which all full-time employees must be reachable for synchronous stand-ups and architectural reviews. Attendance must be logged daily via the Darwinbox HR portal.
- **Probation Period:** All newly appointed regular employees undergo a mandatory six-month probationary evaluation. Performance reviews are conducted at the third and fifth months. Written confirmation is issued upon successful completion. The company reserves the right to terminate employment during probation with thirty days of notice or salary in lieu thereof.

- **Notice Period & Separation:** A standard notice period of sixty days applies to all confirmed full-time employees. In instances of proven gross misconduct, intellectual property theft, or severe confidentiality breach, employment is terminated immediately without notice or severance pay. All company-issued assets must be returned prior to the last working day. Final settlements are disbursed within thirty days of the employee's exit date.
- **Confidentiality Mandate:** Employees are prohibited from disclosing internal system architectures, source code, user databases, or financial metrics to any unauthorized external entity during or after their tenure.

4. Leave Policy

The devMatch leave framework is designed to ensure personal well-being while safeguarding continuous platform availability.

- **Earned Leave (EL) / Privilege Leave (PL):** 18 days per calendar year, accrued at 1.5 days per month. Requires seven days of advance notice for leave exceeding three consecutive days. Up to 15 unused days may be carried forward annually, with total accumulation capped at 45 days.
- **Casual Leave (CL):** 8 days per calendar year, credited on January 1. Designed for urgent personal matters. A maximum of three consecutive days can be availed at once. Unused CL lapses on December 31.
- **Sick Leave (SL):** 8 days per calendar year, credited on January 1. Medical certificates from a registered medical practitioner are mandatory for absences exceeding two consecutive working days.
- **Maternity Leave:** 26 weeks (182 calendar days) of fully paid leave for female employees for up to two surviving children, in strict compliance with the Maternity Benefit (Amendment) Act, 2017.
- **Paternity Leave:** 15 working days of fully paid leave for male employees upon the birth or legal adoption of a child, to be utilized within six months.
- **Bereavement Leave:** Up to 5 consecutive working days of fully paid leave in the event of the loss of an immediate family member.
- **Public Holidays:** devMatch observes 10 mandatory paid holidays per calendar year across its Hyderabad and regional offices.

5. Remote Work Guidelines

devMatch operates a hybrid-first engineering model. Remote work privileges require strict adherence to technical security and availability standards.

- **Infrastructure Requirements:** Employees must maintain a stable fiber broadband internet connection with a minimum symmetrical speed of 50 Mbps.
- **Network Security:** Direct connection to internal staging environments, source code repositories, and cloud dashboards is permitted only through the corporate encrypted Virtual Private Network (VPN).
- **Synchronous Availability:** Engineers must attend their team's daily stand-up meeting at 10:15 AM IST via Google Meet and maintain an accurate Slack status whenever away from their workstation for longer than 30 minutes.
- **Workspace Etiquette:** Professional, quiet workspaces are mandatory during external client presentations and cross-company architectural meetings.

6. Code of Conduct

All employees must exhibit uncompromising integrity, professionalism, and mutual respect.

- **Workplace Behavior:** Treat all peers, community members, and open-source contributors with dignity. Zero tolerance is enforced against bullying, intimidation, or retaliation.
- **Professional Communication:** All Slack channels, pull request comments, and code reviews must remain constructive, professional, and free of inflammatory or offensive language.
- **Conflict of Interest:** Employees must not engage in secondary commercial software consulting or external employment without prior written authorization from the Vice President of Engineering.

7. Security Policy

Security is an architectural imperative for a platform serving software engineers.

- **Credential Management:** All corporate devices must utilize full-disk encryption (FileVault for macOS, BitLocker for Windows/Linux). Multi-Factor Authentication (MFA) via hardware security keys or authenticator apps is mandatory for all internal tools.
- **Software Installation:** Installing unapproved third-party software, browser extensions, or unverified open-source binaries on corporate workstations is prohibited.
- **Incident Reporting:** Any suspected phishing attempt, credential compromise, or device loss must be reported within 60 minutes to security@devmatch.in and the #security-alerts Slack channel.

8. Product & Feature Development Guidelines

Every feature introduced into the devMatch ecosystem must adhere to structured engineering governance.

- **Feature Proposal:** All new product features must begin with a formal Request for Comments (RFC) document submitted to the internal engineering Notion repository.
- **Architectural Sign-Off:** The RFC must detail system scalability, database schema changes, and API contracts, requiring explicit sign-off from the Lead Architect before coding begins.
- **User Experience Consistency:** User interface components must utilize the official devMatch Design System (MatchUI) to ensure uniform developer experience across web and mobile interfaces.

9. Engineering Communication & Public Standards

As a developer-facing brand, all external-facing technical content must reflect high engineering standards.

- **Technical Blog Posts:** Articles published on the official devMatch Engineering Blog must undergo technical peer review to verify algorithmic accuracy and benchmarks.
- **Open-Source Contributions:** Employees contributing to public devMatch repositories must adhere to semantic commit messaging, maintain

comprehensive markdown documentation, and include automated test suites.

- **Community Engagement:** Engineers interacting on the devMatch public community forum must respond constructively within 48 hours to bug reports and feature inquiries.

10. Software Development Lifecycle (SDLC)

devMatch follows an agile, continuous-delivery SDLC model.

- **Sprint Cycle:** Teams operate on two-week sprints starting on alternate Mondays. Sprint planning occurs on Monday mornings, and retrospectives take place on alternate Friday afternoons.
- **Specification Stage:** No code development commences without an approved Jira Epic mapped to a documented Notion technical specification.
- **Environment Progression:** All code progresses sequentially through Development, Staging, and Production environments. Direct pushes to Staging or Production are system-blocked.

11. Coding Standards & Repository Management

Source code uniformity is essential for maintainability across distributed teams.

- **Language-Specific Style Guides:** Backend Golang services must follow the official Go Code Review Comments style; frontend TypeScript/React repositories must adhere to the devMatch ESLint/Prettier configuration.
- **Branching Strategy:** Repositories follow Trunk-Based Development. Feature branches must be short-lived (maximum lifespan of three business days) and branched directly from `main`.
- **Secret Management:** Hardcoding API keys, JWT secrets, or database credentials in source code is an immediate severity-one violation. All secrets must be injected via HashiCorp Vault at runtime.

12. Code Review & Pull Request Workflow

Code reviews are our primary defense against regressions and architectural drift.

- **Approval Threshold:** Every pull request (PR) requires a minimum of two approvals from peer engineers, including at least one Senior Software Engineer or Code Owner.
- **Size Limitations:** Pull requests should not exceed 400 lines of code changes (excluding auto-generated files) to ensure meaningful human review.
- **Review SLA:** Engineers are expected to provide initial review feedback on assigned pull requests within four business hours.

13. CI/CD & Deployment Strategy

devMatch utilizes automated integration and deployment pipelines to maintain high release velocity.

- **Continuous Integration:** Every pull request automatically triggers GitHub Actions pipelines executing unit tests, static application security testing (SAST), and linting checks. PRs cannot be merged unless all checks pass.
- **Deployment Windows:** Production deployments are automated via ArgoCD and occur continuously between Tuesday and Thursday, 10:00 AM to 4:00 PM IST. Deployments on Fridays or weekends require explicit Vice President approval.
- **Rollback Readiness:** Every deployment release must include an automated, tested rollback manifest capable of reverting production services within 180 seconds of alert trigger.

14. Issue Tracking & Bug Reporting

Structured tracking ensures rapid triage and resolution of platform defects.

- **Jira Nomenclature:** All bug tickets must include a standardized title, reproducible steps, environment details, expected behavior, and actual error logs.
- **Severity Definitions:**
 - Severity 1 (Critical): Platform outage, authentication failure, or data loss. Resolution SLA: 4 hours.

- **Severity 2 (Major):** Core matchmaking or chat feature degraded without workaround. Resolution SLA: 24 hours.
- **Severity 3 (Minor):** UI glitch or non-critical edge case. Resolution SLA: Next sprint cycle.

15. Database Architecture & Teleport Access Control

Protecting our user graph and relational data is our top operational priority.

- **Database Engine Standards:** Core transactional databases utilize PostgreSQL on AWS RDS; high-throughput real-time chat caches utilize Redis cluster deployments.
- **Zero-Trust Access:** No individual developer has direct SSH or static credential access to production database instances. All access is brokered through Teleport zero-trust proxies with short-lived certificates.
- **Query Auditing:** All production read-only queries executed during incident investigations are automatically logged and audited monthly by the Security Engineering team.

16. Infrastructure & Cloud Management

devMatch operates a cloud-native infrastructure architecture.

- **Primary Hosting Region:** Production workloads are deployed exclusively within the AWS Asia-Pacific (Mumbai - `ap-south-1`) region, with disaster recovery replication in Hyderabad (`ap-south-2`).
- **Infrastructure as Code (IaC):** Every cloud resource—including VPCs, Kubernetes (EKS) clusters, and S3 buckets—must be provisioned and versioned using Terraform. Manual console modifications are prohibited.
- **Cost Optimization:** Unused development and staging environments are automatically scaled to zero during non-working hours (10:00 PM to 7:00 AM IST) via automated lambda schedulers.

17. Site Reliability Engineering (SRE) & Incident Severity Levels

The SRE team ensures platform availability exceeds our 99.95% uptime Service Level Agreement (SLA).

- **On-Call Rotation:** Engineers participate in weekly PagerDuty on-call rotations compensated by additional time-off allowances.
- **Incident Commander (IC):** Upon triggering a Severity 1 alert, the designated on-call engineer assumes the IC role, establishing an incident bridge on Google Meet and managing triage.
- **Post-Mortem Requirement:** Every Severity 1 or Major outage requires a blameless root cause analysis (RCA) document published to Confluence within three business days of incident closure.

18. Corporate Branding & External Communication Rules

Consistent brand identity reinforces devMatch's standing in the engineering community.

- **Logo Usage:** Always utilize the official high-resolution devMatch primary logo on dark or light backgrounds as specified in the Brand Book. Distortion or color alteration is strictly forbidden.
- **Media Outreach:** Employees must not speak to press, industry analysts, or media publications on behalf of devMatch without explicit authorization from the Corporate Communications Director.
- **Social Media Guidelines:** Personal social media profiles must clearly state that opinions expressed are personal and do not represent devMatch Technologies.

19. Salary Structure, Payroll & Taxation

devMatch maintains full compliance with Indian statutory payroll and taxation mandates.

- **Pay Frequency:** Monthly net salaries are credited directly to registered Indian bank accounts on the last working day of each month.

- **Cost to Company (CTC) Components:** Comprises 50% Basic Salary (forming the basis for Provident Fund and Gratuity), House Rent Allowance (HRA at 50% of Basic for metro cities), Flexible Benefit Plan (FBP), and Special Allowance.
- **Statutory Compliance:** Employee Provident Fund (12% employee + 12% employer contribution), Professional Tax (Telangana state schedule), and Tax Deductions at Source (TDS based on employee's declared Old/New Tax Regime) are deducted monthly.
- **Gratuity:** Payable under the Payment of Gratuity Act, 1972 upon completing five continuous years of service, calculated as 15 days of basic salary for each completed year.

20. Performance Appraisals & Engineering Ladder

devMatch fosters transparent career progression through structured evaluations.

- **Review Cycles:** Formal performance evaluations occur bi-annually in July (H1 check-in) and January (H2 review and annual appraisal). Compensation revisions and promotions take effect on April 1.
- **Engineering Tracks:**
 - Individual Contributor (IC) Track: SDE-1 → SDE-2 → Senior SDE → Staff Engineer → Principal Engineer → Distinguished Fellow.
 - Engineering Management Track: Engineering Manager → Senior Engineering Manager → Director of Engineering → VP of Engineering.
- **Promotion Criteria:** Promotions require demonstrated mastery of the target level's technical scope, consistent architectural ownership, and peer mentorship.

21. Expense & Reimbursement Policy

devMatch reimburses legitimate business expenses incurred during official duties.

- **Eligible Expenses:** Approved travel for client or conference visits, remote work internet allowances (up to Rs. 1,500 per month with valid ISP invoice), and approved hardware peripherals.

- **Submission Process:** Expenses must be logged on the Darwinbox expense module with attached GST-compliant invoices within seven business days of incurrence.
- **Reimbursement Timeline:** Approved claims are disbursed alongside the subsequent monthly payroll cycle.

22. Data Privacy & DPDP Act Compliance

devMatch strictly enforces data protection standards across all user and employee data.

- **Statutory Adherence:** We operate in full compliance with India's Digital Personal Data Protection (DPDP) Act, 2023, and the EU General Data Protection Regulation (GDPR) for global users.
- **Data Minimization:** Systems must collect only data attributes explicitly necessary for developer matchmaking and profile verification.
- **Right to Erasure:** Any user request for account deletion must be acknowledged within 48 hours and processed across all active databases and backups within 15 calendar days.

23. Third-Party Integrations & Vendor Management

Integrating third-party software requires rigorous security and compliance vetting.

- **Approved Enterprise Tools:** Google Workspace, Slack, Notion, GitHub Enterprise, AWS, Jira, Confluence, and Darwinbox.
- **New Integration Request:** Engineers proposing new third-party SaaS tools or SDKs must submit a Vendor Evaluation Form detailing data export mechanisms, encryption standards, and SOC-2 compliance.
- **Access Revocation:** IT Support must terminate all third-party vendor and employee access tokens within 60 minutes of an employee's formal separation.

24. Incident Management & Root Cause Analysis (RCA)

A structured RCA process ensures continuous organizational learning.

- **Incident Timeline Logging:** During an incident, the IC or Scribe must record exact timestamps of symptom discovery, containment steps, and service restoration in the #incidents Slack channel.
- **Five-Whys Methodology:** The post-mortem must apply the "Five Whys" methodology to identify underlying systemic flaws rather than attributing failure to human error.
- **Action Item Tracking:** Engineering tasks resulting from an RCA must be assigned Jira tickets with a maximum completion SLA of 14 days.

25. Onboarding & Exit Process

A seamless lifecycle experience is maintained for every devMatch team member.

- **Day-One Onboarding:** New hires complete statutory KYC verification, sign IP/NDA agreements, receive hardware assets, and are assigned a Peer Engineering Buddy within their first 24 hours.
- **Exit Formalities:** Resigning employees must complete structured knowledge transfer sessions, return corporate laptops and security badges, and clear departmental dues to initiate their Full and Final Settlement (FFS) processing.

26. Security Review & Code Checklist

Every pull request must pass the mandatory devMatch Security Code Checklist:

1. Are all user inputs sanitized to prevent SQL injection and Cross-Site Scripting (XSS)?
2. Is database pagination implemented on all list-returning API endpoints?
3. Are proper authorization checks (RBAC/ABAC) verified before returning protected resources?
4. Are database migrations backward-compatible to prevent zero-downtime deployment failures?
5. Are all unit test suites passing with code coverage maintained above 85%?

27. Internal Collaboration Tools

Our digital workspace is designed to minimize asynchronous communication friction.

- **Slack:** Primary real-time communication. Public channels should be used over direct messages for technical discussions to preserve organizational knowledge.
- **Notion:** Single source of truth for architectural RFCs, product specifications, and onboarding manuals.
- **Confluence:** Dedicated repository for formal engineering post-mortems, compliance matrices, and disaster recovery runbooks.

28. Identity, Access Control & Zero-Trust Policies

devMatch adheres to a strict Zero-Trust security model.

- **Least Privilege Access:** Access rights to cloud infrastructure, source code repositories, and HR data are restricted to the absolute minimum required for an employee's active role.
- **Quarterly Access Audits:** Security Engineering conducts mandatory quarterly audits of all administrative privilege assignments across AWS, GitHub, and Okta. Unused permissions are revoked automatically.

29. Learning, Upskilling & Conference Allowances

We actively invest in our engineers' ongoing technical growth.

- **Annual L&D Allowance:** Every full-time engineer receives an annual reimbursement budget of Rs. 60,000 to purchase technical books, advanced online programming courses, or cloud architecture certifications.
- **Conference Sponsorship:** Engineers selected to speak at major Indian or international technical conferences receive full sponsorship for travel, accommodation, and registration passes.
- **Internal Knowledge Drops:** Bi-weekly Friday engineering seminars where team members present deep dives on novel algorithms, language features, or architecture patterns.

30. Quality Assurance & Automated Testing Standards

High code quality is maintained through comprehensive automated testing hierarchies.

- **Unit Testing:** Individual functions and methods must include automated unit tests using Go's testing package or Jest/Vitest for TypeScript, maintaining minimum 85% branch coverage.
- **Integration Testing:** Microservices must execute automated contract tests against mock database and API dependencies prior to staging deployment.
- **End-to-End (E2E) Testing:** Core user journeys (user onboarding, profile matching, real-time chat initiation) are tested daily using Playwright automated browser suites.

31. Frequently Asked Questions (FAQ)

- **How do I reset my Okta / enterprise VPN password?**

Submit an automated self-service recovery request via the IT Portal or message the IT Helpdesk bot on Slack.

- **Where do I find the latest architectural RFC templates?**

Navigate to the Notion Engineering Root space under "Templates → RFC Specification Template."

- **Whom do I contact for payroll tax exemption (HRA/LTA) proof submissions?**

Upload documentation directly to the Darwinbox Tax module or email

payroll@devmatch.in.

- **How do I request access to AWS staging logs?**

Submit an Okta access request for the "AWS-Staging-Viewer" group; manager approval is routed automatically.

32. Emergency Contacts & Escalation Matrix

In the event of physical, operational, or medical emergencies, utilize the following priority matrix:

- **Internal Escalations:**

- Campus Security Control Desk (Hyderabad HQ): +91 40 6900 1111
- Facilities & Emergency Medical Response Desk: +91 40 6900 2222
- Corporate IT Security & Data Breach Hotline: +91 40 6900 3333 / security@devmatch.in
- HR & POSH Confidential Helpdesk: posh-committee@devmatch.in
- **External Indian Emergency Services:**
 - All-in-One National Emergency Helpline: 112
 - Police Assistance (Telangana): 100
 - Ambulance Services: 108
 - Fire & Rescue Services: 101
 - National Cyber Crime Reporting Hotline: 1930

33. Employee Referral Program

devMatch encourages team members to refer exceptional engineering talent.

- **Referral Bonus:** Employees receive a successful referral bonus of Rs. 75,000 for Senior Engineering hires and Rs. 50,000 for SDE-1/SDE-2 hires, payable after the candidate completes six months of confirmed service.
- **Submission Process:** Referrals must be submitted via the internal Darwinbox Careers module prior to the candidate's direct application.

34. Intellectual Property, Copyright & Open-Source Policy

- **Corporate Ownership:** All software algorithms, architectures, patents, and documentation developed during employment constitute the exclusive intellectual property of devMatch Technologies India Private Limited.
- **Open-Source Participation:** Employees may contribute to external open-source projects or build non-competing side projects, provided they do not use corporate hardware, proprietary code, or internal intellectual property, and have submitted an Open-Source Disclosure Form to the CTO.

35. Free Tier, Premium Subscriptions & Enterprise Discount Policy

- **Platform Pricing Tiers:** devMatch offers a Free Developer Tier (standard profile matching and community access), a DevPro Tier (advanced GitHub graph analytics and priority matching), and an Enterprise Team Tier.
- **Internal Employee Access:** All full-time devMatch employees receive complimentary lifetime access to the DevPro Tier for their personal developer profiles.
- **Academic Scholarships:** Accredited Indian engineering college students (B.Tech / M.Tech / BCA) are eligible for a 100% scholarship on DevPro subscriptions upon verifying their `.edu.in` institutional email address.

36. Custom Internal Engineering Jargon & Lexicon

- **Matcher Engine:** Our core Golang/Graph-based service that computes algorithmic compatibility scores between developers.
- **SyncDrop:** The internal real-time WebSocket messaging relay powering developer-to-developer chat.
- **Ninja Patch:** An expedited Severity-1 hotfix deployed directly to production via the emergency break-glass pipeline.
- **DevJam:** Our annual internal 48-hour engineering hackathon held across all Indian office locations.
- **GraphNode:** An individual developer profile entity stored within our distributed Neo4j/PostgreSQL user graph.

37. Engineer Community & Platform Moderation Rules

We maintain a supportive, merit-based environment across all public devMatch spaces.

- **Code of Courtesy:** Debates on programming languages, frameworks, or system designs must remain intellectually honest and free of personal attacks or gatekeeping.

- **Spam & Scrapers:** Automated scraping of developer profile email addresses or soliciting commercial outsourcing services inside engineering chat rooms results in immediate ban and account termination.
- **Moderation Reporting:** Community violations must be flagged to `moderation@devmatch.in` or via the in-app "Report Developer" interface.

38. Sample Internal Email & Slack Templates

- **Leave Request Email / Slack Notification:**
 - Subject: Leave Application — [Employee Name] — [Dates]
 - Body: "Hi [Manager Name], I have applied for [Earned/Sick/Casual] Leave from [Start Date] to [End Date] on Darwinbox due to [Reason/Personal Commitment]. My active pull requests have been handed over to [Peer Engineer Name]. Please approve."
- **Severity 1 Incident Slack Declaration:**
 - Channel: `#security-alerts` / `#incidents`
 - Text: "[SEVERITY 1 DECLARED] Service: [Service Name]. Symptom: [Brief Description]. Incident Commander: @[Engineer Handle]. Bridge Link: [Google Meet URL]. All on-call engineers join immediately."

39. Annual Corporate Events & Hackathons

- **devMatch Foundation Day (June 15):** Annual company-wide celebration featuring executive keynotes, engineering excellence awards, and campus celebrations in Hyderabad and Bengaluru.
- **Winter DevJam (December):** Our flagship 48-hour internal hackathon where engineering teams prototype experimental features, several of which are integrated into the annual product roadmap.
- **Engineering Leadership Summit (August):** A two-day offsite for Engineering Managers, Staff Engineers, and Architects to define long-term technical strategy and architecture roadmaps.

40. Miscellaneous, Appendix & Policy Change Log

- **Document Repository:** All formal HR forms, engineering RFC templates, and reimbursement claim sheets are stored in the internal Notion directory under `/devmatch/corporate/templates`.
- **Policy Interpretation:** In the event of ambiguity regarding any internal policy, the final interpretation rests with the Chief Human Resources Officer and Legal Counsel.
- **Policy Revision Log:**
 - Version 2024.01: Initial publication of corporate policy handbook.
 - Version 2025.04: Revised remote work broadband requirements and cloud access security protocols.
 - Version 2025.10: Updated statutory leave structure in accordance with Telangana state labor amendments.
 - Version 2026.08: Comprehensive engineering wiki update incorporating DPDP Act 2023 compliance guidelines, Teleport zero-trust access rules, and expanded 40-section internal structure.
